#### **Ute Chute designed to lick a delivery problem for livestock farmers | North Queensland Register | Queensland**

21/09/2020

Two young Queensland brothers are building Ute Chutes for customers to more easily handle dry lick made at the family's Nutri-Lick feed supplements business in Mitchell. Jack and Will Jones have returned to the family's diversified business in Mitchell west of Roma with skills that fit neatly into the growing operation. Most of Nutri-Lick's dry lick products are sold in 25kg bags which require a lot of hard yakka for customers to lug them to feed stations. So Jack drew up some initial designs for the Ute Chute which fits on the back of a farm ute and delivers loose dry lick from either side. Will's boilermaking skills then came into play. His parents still had a roto moulding oven they had bought some years earlier to commercially make poly water tanks. Will built a steel mould to make the poly ute tanks which hold one tonne of dry lick (which is more accessible to stock than lick blocks). Finely-ground poly powder is poured into the mould which is then placed in the cooking oven, heated to 270C and rotated for 40 minutes to produce the orange-coloured tanks.

### Rotomolding Market News - North America

#### **Step2 Georgia acquisition needed for 'exceptional' demand**

Streetsboro, Ohio-based Step2 Co. LLC has acquired manufacturing, distribution and shipping assets in Decatur, Ga., where it will employ 150-175 people at a new plant there. The site previously housed CI Rotomolding USA Inc., which had announced in October 2019 that it was looking for a joint venture partner or to be acquired. Step2 didn't acquire the business or enter into a JV, but it did purchase the manufacturing equipment and it is subleasing the 132,000-square-foot facility, Step2 CEO Tony Ciepiel told *Plastics News* in an email.

### **Bennington 23 SCCTX Boat Test | Boating Magazine**

While the center console hogs the spotlight, additional fish-friendly features are spread evenly throughout. Forward, twin deluxe high-back bass seats with flip-down armrests are positioned just inside the fencing; roto-molded stowage cabinets nestle in each corner. Our test boat traded out one cabinet for a 24-gallon livewell with flanking rod holder and cup holder. Behind, a standard 18-gallon well sits below the flip-up seat in front of the console. Generous rod stowage is recessed into the open space below the coaming pads running down both port and starboard sides. Additional slots are at the ready to secure fishing rods and nets.

### **Indiana Partners for Pollution Prevention Welcomes Six New Members**

The Indiana Partners for Pollution Prevention (Partners) inducted six new members at its 23rd Annual Indiana Pollution Prevention (P2) Conference and Trade Show held on Sept. 16 and 17, 2020. This year's meeting was virtual because of COVID-19 precautions. As members, each organization pledges to implement voluntary environmental initiatives at its facility, share information and expertise with other businesses, foster environmental stewardship among its employees, and help raise public awareness. Elkhart and South Bend plants. EPI is one of the largest custom rotational molding companies in the United States, consisting of six independent facilities. EPI's Elkhart and South Bend facilities were both inducted into Partners. EPI creates custom plastics in virtually every application imaginable, in lengths up to 160 inches, and an almost endless variety of shapes and thicknesses from storage tanks to boat seating and agricultural applications to waste bins. The company has been in operation for 32 years.
